

Why an Offline Aging-In-Place Assistant for senior-focused living is a good choice

ProKNX wants to extend the time that people can stay comfortably in the familiar environment of their homes

Advantages of a voice-controlled Offline AAL Smart-Home system

❖ Safety and Security

- Everyday tasks become easier and require **far less physical effort**
- A nominated **person outside the home can be contacted** on their mobile phone as soon as the assistant detects a change in routine, such as an unusually long time spent in the bathroom
- A **help call can be triggered verbally** from anywhere in the home
- False alarms are avoided as a **call for help can be verbally cancelled**
- **Functions without an Internet connection**

❖ Privacy

- The ProKNX Offline smart-home assistant does not need an Internet connection to work. **What's said at home stays at home.**
- **Nothing is recorded** and nothing is transmitted to the cloud
- Voice recognition runs entirely on the assistant
- **No personal details or account set-up are needed** to install or use the device

❖ Flexibility

- **Completely customizable.** Personal words and sentences can be easily learnt and understood by the assistant
- The assistant understands commands said in **a thousand different ways**
- Thanks to a personalized service, ProKNX can rapidly develop and adapt the assistant to **suit your individual needs**
- **The system is interoperable** and can work with other help organizations
